G7® Certified System
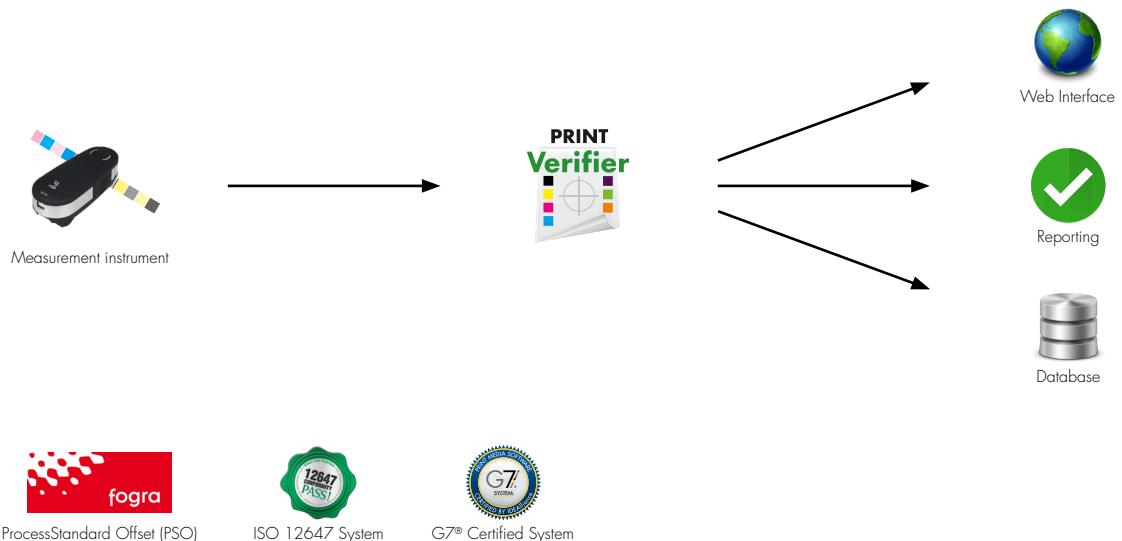

Main benefits

Color measurement
· Supports any handheld instrument
· Front-end for process control
· Acquisition for cloud services

Conformance assessment
· All ISO printing standards
· G7® standards
· Custom standards

Reporting
· Pass/Fail/Scoring reports
· XML data base
· PDF and html reporting

**Alwan PrintVerifier (APV/X) is more than a color assessment tool!**

It is made for printers and print buyers who need to assess the conformance of printed products with ISO 12647, G7®, ISO/PAS 15339 or any custom standard. Alwan PrintVerifier is the ideal tool for your print assessments and reporting.

Alwan PrintVerifer (APV/X) is a unique color assessment tool that allows you to certify your prints and jobs conformity with ISO 12647, G7® or custom standards.

Automated data collection for Alwan PrintStandardizer and third party cloud services

Alwan PrintVerifier and Alwan PrintStandardizer have been designed to help printers print better, more accurate and more stable colors. APV/X measures data that is automatically collected and processed by Alwan PrintStandardizer for ISO TVI or G7® curves creation, and ICC Hydra Profiling® (option).

Alwan PrintVerifier can send data to Alwan Print Standardizer and third party cloud services thanks to its ftp connection.
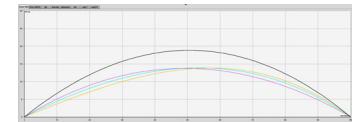

ISO 12647 and G7® conformity assessment
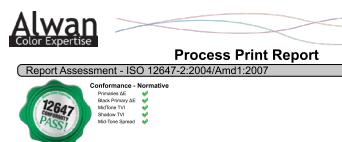

Alwan PrintVerifier includes industry-first ISO 12647 and G7® assessment reporting. This is a guarantee that any sheet and job that passes APV/X assessment will pass any customer or third-party audit. APV/X allows you to go the extra mile by setting your own standard or your own custom scoring system for your product and job assessments.

Spot color and Extended Color Gamut assessment with HiFi option

Alwan PrintVerifier's HiFi (High-Fidelity) coupled with CxF/X-4 technology has been designed to control spectrally spot and brand color reproduction accuracy and quality.

If a spot color is printed with process inks on an Extended Color Gamut (ECG) process, APV/X can also assess the conformance of the ECG process – such as CMYKOGV – to reference printing conditions.

APV/X is used by printers after production to control that printed colors match chosen standards.

Data base access from virtually anywhere with the Alwan Universal Web Interface

All Alwan PrintVerifier's measurement data and reports are stored on the server of your choice and can be accessed remotely thanks to Alwan Universal Web Interface. This web solution allows printing houses monitor live and done jobs from any computer, anywhere in the world, and with any web browser.
